Unlock a Free Analyzer with Your ELISA Kit Order

Upgrade your equipment with the purchase of 25 ELISA kits totaling €11,125 (with the option of split deliveries), your lab will receive a BGMR-1000 enzyme immunoassay analyzer — worth €4,430 — completely free.

**25 ELISA KITS.
Get the Analyzer
for Free!**

The BGMR-1000 is a next-generation instrument designed to deliver fast, precise, and reliable immunoassay readings, featuring a user-friendly touch screen interface and reduced read times for 96-well plates.

Don't miss this opportunity to upgrade your lab equipment at no extra cost. Advanced technology comes with your next order!

PROMOTION

Enzyme Immunoassay Analyzer with Baiheng Technology

The BGMR-1000 is an enzyme immunoassay analyzer developed by Hangzhou Baiheng Technology Co., Ltd.

This product utilizes the photoelectric colorimetric method for enzyme-linked immunosorbent assay (ELISA) of samples, with a detection wavelength range of 400–750 nm. It is suitable for various applications, including kinetic enzyme research. The instrument delivers fast and accurate measurements, with single-wavelength readings completed in just 6 seconds per 96-well plate, and dual-wavelength readings in 10 seconds per 96-well plate.

Product Model	BGMR-1000
Light Source	Long-life halogen lamp 6V10W
Wavelength Range	340–750 nm
Filters	Four standard filters at 405, 450, 492, and 630 nm; supports up to eight filters
Filter Bandwidth	6–8 nm
Absorbance Range	0.000–4.000 OD
Resolution	0.001 OD
Linearity	Correlation coefficient > 0.999 (0–2.0), > 0.99 (2.0–4.0)
Wavelength Indication Error	≤±3 nm
Wavelength Repeatability	≤±1.5 nm
Repeatability	≤0.3% (0–3.0), ≤2% (3.0–4.0)
Stability	≤0.3% (0–3.0), ≤2% (3.0–4.0)
Accuracy	≤±0.005 OD (0–2.0), ≤±1% (2.0–3.0), ≤±1.5% (3.0–4.0)
Sensitivity	Sensitivity ≥ 0.010 OD
Channel Difference	<0.01 OD (standard filter at 1.0 OD)
Measurement Speed	6 sec/96 wells (single wavelength), 10 sec/96 wells (dual wavelength)
Shaking Plate	3 speeds (high, medium, low)
Temperature Range	Ambient temperature +5°C to 85°C
Control Method	10.1-inch high-resolution color touchscreen with built-in software
Data Export Format	excel, txt, pdf
Printing	Direct report printing (optional USB thermal printer)
Interface Mode	2 USB Type-A ports, 1 Ethernet port
Dimensions	300 x 470 x 200 mm
Net Weight (kg)	13

ELISA Kits

Focus on Developing and Manufacturing ELISA Assay Kits Over 14 Years. Set for your Academic Research.

If you encounter any of the following problems during your experiment, it's time to try Elabscience® high sensitivity and specificity ELISA assays.

- **Can't find reliable reagents and assays?**
- **Want to complete the test with more convenient operation and less time?**
- **Try to detect the target with a smaller sample size?**

High-quality optimized **Elabscience® ELISA Kits** enable you to detect specific targets with confidence, reliability, and consistency.

You can opt for our **QuicKey Pro™ ELISA Kits** to complete the entire experiment in **90 min**.

Alternatively, you can also choose **Mini Sample ELISA Kits**, part of our new series specially designed for mouse item detection, which reduces the sample volume to **only 25 µL**.

Elabscience® products have contributed to researchers publish **over 21,218 papers in SCI journals**, with the highest impact factor reaching up to **105,612.1**.

Now, you can purchase ELISA kits online or contact our distributors of Elabscience® all around the world.

Product Categories

QuicKey Pro™ ELISA Kits

One step, complete assay in 90 min

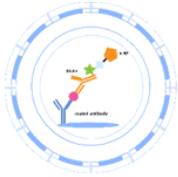

Mini Sample ELISA Kits

Less sample, only need 25 µL

High Sensitivity ELISA Kits

Protein concentration at Fg level can be detected

Traditional ELISA Kits

Various protein targets

SARS-CoV-2 ELISA Kits

Apply to detect SARS-CoV-2 antigen/antibody

Uncoated ELISA Kits

Cost-Effective, save on budget by coating the Micro ELISA pre-Plate by yourself

Product Comparison

Items	Traditional ELISA Kits		Quickey Pro™ ELISA Kits		Mini Sample ELISA Kits	High Sensitivity ELISA Kits
Product Feature	Various Protein Targets		Minimum Experiment Time		Less Sample Volume	Highest Sensitivity
Detection Method	Sandwich	Competitive	Sandwich	Competitive	Sandwich	Sandwich
Sample Volume	100 µL	50 µL	50 µL		25 µL	100 µL
Operation Time	3.5 h	2.5 h	90 min		3.5 h	3.5 h
Operation Steps	3 Steps	2 Steps	1 Step		3 Steps	3 Steps
Sensitivity	pg/mL		pg/mL		pg/mL	fg/mL
Storage	2-8° C		2-8° C		2-8° C	2-8° C

Publications

Elabscience® products have been cited in over 21,218 papers published by SCI journals, the total impact factor has been over 105,612.1 of those papers using our products, covering many top journals in biology research, such as **Nature Medicine, Nature, Cell, Immunity, Molecular Cancer, Circulation, Advanced Materials**,etc.

Top 200 Hot-Selling ELISA Kits - Elabscience

To help researchers better conduct their experiments, we have compiled the top 200 most popular **ELISA kits** used in scientific research.

These targets cover more than 10 hot research areas, such as **cancer, immunology, cardiovascular, metabolism, neuroscience, stem cells, microbiology, cell biology, signal transduction, and epigenetics & nuclear signaling**, it makes your experiments more efficient!

ELISA Kit Validation Report

Product tested: Human AREG (Amphiregulin) ELISA Kit, 96 T

Objective: The aim of this experiment was to set up and validate the newly acquired Human AREG ELISA kit, optimize the working dilution range for our samples, and preliminarily assess the release of AREG into the culture medium under different conditions. This was motivated by previous qPCR data indicating AREG gene expression in our cell lines.

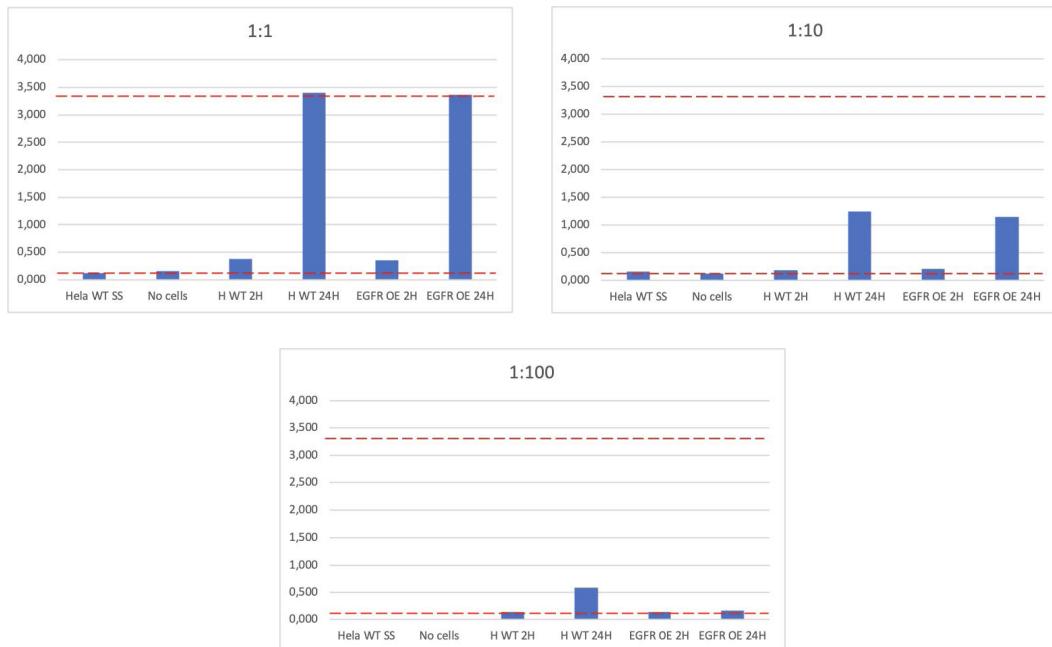

Experimental design:

Conditioned media were collected from different experimental conditions:

- **Starvation only (SS):** Cells incubated in starvation medium.
- **SS no cells:** Starvation medium that was never conditioned with cells, used as negative control.
- **HeLa WT:** Wild-type HeLa cells stimulated with EGF (1 ng/ml) for 2h or 24h.
- **HeLa EGFR OE:** HeLa cells overexpressing EGFR stimulated with EGF (1 ng/ml) for 2h or 24h.

To determine the appropriate working range, three sample dilutions (1:1, 1:10, and 1:100) were tested, as baseline levels of AREG in supernatants were unknown.

Results:

- The dilution curves indicate that the **1:10 dilution is optimal**, placing the signal within the dynamic range of the standard curve while avoiding both the upper detection limit (upper red dashed line) and background noise (lower red dashed line).
- The kit performed reliably, providing consistent absorbance readings across dilutions.
- AREG was clearly detectable in the supernatants of EGF-stimulated cells, particularly in EGFR-overexpressing cells, consistent with mRNA upregulation.
- No significant signal was observed in the unconditioned starvation medium (SS no cells), **confirming assay specificity**.

This preliminary test demonstrates that the kit is suitable for quantifying secreted AREG in our system and will be used for future experiments.

Alexia Conte
Istituto Europeo di Oncologia

June 2025

The background of the entire page is a close-up, abstract photograph of liquid droplets, likely oil or water, on a surface. The droplets are iridescent, reflecting a spectrum of colors including pink, blue, and purple. They are of various sizes and are interconnected by thin, translucent liquid bridges, creating a complex, organic pattern that covers the entire page.
