Limited-Time Promotion

The Redi-Dri™ packaging system eliminates the common issue of clumping that is noted with many hygroscopic salts and buffers and provides free-flowing, ready-to-use material at all times. Don't waste valuable time and resources using reagents that readily absorb environmental moisture and harden prior to use. **Try Redi-Dri™ today!**

The Redi-Dri™ Advantage

Efficiency

Drive efficiencies by eliminating the need to chip, chisel or grind common reagents and salts. Consistent, free-flowing material quickens sample preparation, solvates reagents faster, and reduces the frustration involved with breaking clumps in hygroscopic powders.

Time Savings

Using Redi-Dri™ allows you to save your valuable time that you would spend on breaking up your clumped products.

Labor Savings

The free flowing characteristic allows for quicker prep time and faster processing of the product providing increased labor savings.

Cost Effective

Minimize the need to break up solids and save on valuable time. Reduce the risk of injury that laboratories and production units face and save direct labor and potential injury cost with every Redi-Dri™ use.

Bulk Capabilities

- Eliminate the need for tools of force
- Larger pack sizes more suitable for scale-up processes (up to 25KG sizes available)
- Free-flowing products make material handling easier

Personnel Safety

The Redi-Dri™ packaging system reduces the risk of laceration, sprain and strain, and chemical exposure by reducing the need to utilize “tools of force” when preparing hygroscopic reagents for use.

Waste Reduction

Redi-Dri™ delivers consistent, free-flowing material. Never discard material again that cannot be removed from its packaging or is wasted following analytical standards (product that is prepped cannot be returned to the container).

Quality Assured

The Redi-Dri™ packaging system essentially offers a “desiccator” in every bottle. By limiting the environmental effects of moisture on quality, Redi-Dri™ reduces contamination errors and restricts the effect that moisture can have on your anhydrous products.

Why Choose Redi-Dri™?

What is the most frustrating moment you have experienced in the lab? Inadequate chemicals for the reaction? Or rock-solid material as you open your bottle when you only need a small amount? If you have ever experienced these issues, Merck has your solution - Redi-Dri™!

Redi-Dri™ is an innovative packaging product line that helps eliminate clumping material by adding extra packaging process steps without adding any chemical additives, anti-clumping agents, or hydrophobic compounds. Now you can enjoy free-flowing material without any worries. This is absolutely one of our successes, and Merck is excited to offer you such a highly efficient and cost-saving solution.

We Choose the Best Material

The Redi-Dri™ product line utilizes the freshest, highest quality of material that meets the desired specifications. Such technical evaluation ensures the best opportunity for free-flowing products within our innovative packaging system.

Preparing the Material in the Best Environment

Redi-Dri™ material is prepared and packaged using specialized equipment under environmental conditions specifically designed to promote product usability and high quality of products.

Packaging Innovation

The Redi-Dri™ packaging system essentially provides a “desiccator” in every bottle and limits the environmental effects that moisture can have on product quality.

Redi-Dri™ Test Protocol

A time study was performed to test the Red-Dri Packaging System against standard packaging. Equivalent units of both packaging systems containing potassium chloride (KCl) were introduced to a controlled environment with 85+/-5% relative humidity. Material was visually inspected and tested on a monthly basis by Loss on Drying (LOD). LOD analysis was performed on representative 5 g samples at 130 °C for four hours under full vacuum.

Results indicated

The traditional packaging allowed the KCl to absorb atmospheric moisture resulting in a hard clumpy appearance and a higher LOD value.

The Redi-Dri™ packaging prevented water absorption and LOD values confirm a decrease in moisture content. The Redi-Dri™ KCl remained free-flowing through the 9-months of testing.

Moisture Content of KCl via Loss on Drying (LOD) Redi-Dri™ Packaging vs. Traditional Packaging

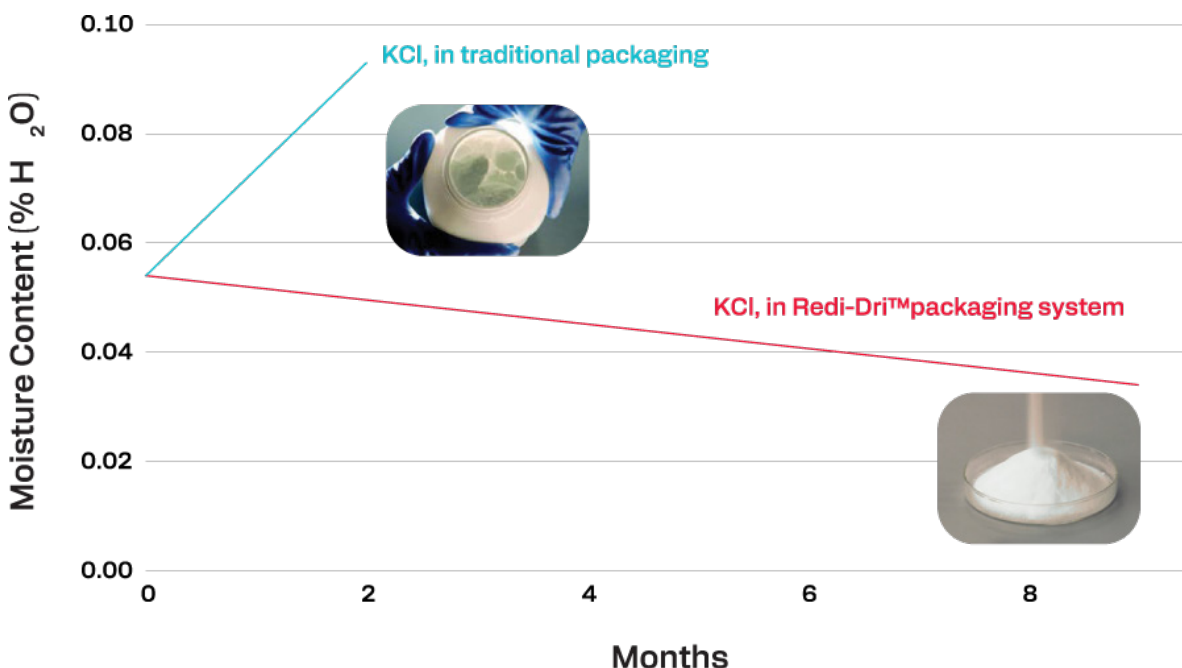

Figure1: he graph illustrated above demonstrates the long-term benefit of the exclusive Redi-Dri packaging system.

The KCl samples from the traditional packaging continued to absorb water from the atmosphere which caused hard chunks to form as shown by increasing LOD values. The LOD results for the Redi-Dri KCl trended in the opposite direction of the traditional packaging and actually showed decreasing H₂O content. The appearance of the Redi-Dri powder therefore remained free flowing throughout the 9 month study.
